City of Riverton - Request for Proposal RFP-2026-014

Digital Citizen Services Portal

Synthetic document for demonstration purposes. The City of Riverton is fictional.

1. Introduction

The City of Riverton (population 180,000) invites qualified suppliers to submit proposals for the design, build, hosting and support of a Digital Citizen Services Portal. The portal will allow residents to request services, make payments and track their requests online.

The contract will run for an initial period of three years, with an option to extend for two additional years.

2. Background

Today, most of the City's 20 resident services are handled by telephone, email or paper forms. Service data is stored in a Salesforce CRM that is more than eight years old. The City wants to increase the share of requests submitted online and reduce processing times.

3. Scope of Work

The supplier shall design and deliver a responsive web portal covering at least 12 resident services in the first release, including waste collection requests, parking permits and complaints.

The supplier shall integrate the portal with the City's existing Salesforce CRM and its online payment provider through documented APIs.

The supplier shall migrate open service requests and resident accounts from the legacy systems, with reconciliation reports approved by the City.

The supplier should propose a roadmap for additional services after the first release.

4. Technical Requirements

The solution must be hosted in a public cloud region located in the EU or the UK.

Residents must be able to create a single account and sign in securely; City staff must sign in with single sign-on using the City's Azure AD.

The portal must conform to WCAG 2.1 level AA, confirmed by an independent audit before go-live.

The platform must achieve at least 99.9% monthly availability.

Pages should load in under 2 seconds for 95% of requests at peak load.

The supplier shall provide a disaster recovery plan with a recovery time objective of no more than 8 hours.

5. Security and Data Protection

The supplier must hold a current ISO/IEC 27001 certification.

All personal data must be encrypted at rest and in transit.

The supplier shall support the City in completing a Data Protection Impact Assessment before go-live.

An independent penetration test must be carried out before go-live and annually thereafter.

The supplier must notify the City of any security incident within 24 hours.

6. Project Management

The supplier shall use an agile delivery approach with regular demonstrations to the City's product owner.

The supplier shall nominate a project manager holding a recognised project management certification such as PMP or PRINCE2.

The supplier shall provide monthly progress reports and attend a monthly steering committee.

7. Training and Support

The supplier shall train City staff and administrators before go-live.

The supplier must provide support during business hours with a response time of no more than 1 hour for critical incidents.

The supplier should offer a warranty period of at least 3 months after go-live.

The supplier shall provide an exit plan ensuring the transfer of code, data and documentation at the end of the contract.

8. Supplier Experience and Team

Bidders must provide at least two references for similar public-sector portal projects delivered in the last five years.

Bidders should include CVs of the key team members, including the solution architect and the accessibility lead.

9. Submission Instructions

Proposals must be submitted as a single PDF file of no more than 30 pages, excluding CVs.

The deadline for submission is 15 December 2026 at 12:00 noon local time.

Pricing must be submitted in a separate file using the pricing template in Annex A.
